Laparoscopic pyeloplasty

A.Basiri

Professor of Urology

laparoscopic pyeloplasty started in 1993. It has grown up and popularized very soon in many departments .

The success rate and complications are nearly the same comparing to open pyeloplasty. We have performed dismembered, flap, Y.V pyeloplasty and fenjer plasty in laparoscopic approach. This is also technique with comparable result to open pyeloplasty in secondary UPG.O. We recommend laparoscopic diagnostic and probably therapeutic in suspicious cases of UPG.O
